The job-oriented basic skills (JOBS) program was conceived in 1977 to provide training courses for lower-aptitude Navy personnel that would enable them to complete Class "A" technical schools successfully. The purpose of the current effort is to develop a JOBS curriculum for the acoustic sensor operations area. Analyses conducted to ascertain job requirements and basic and prerequisite A school requirements showed

that A school students need training in mathematics, reading, study skills, memorization, science, mechanical relationships, and problem solving. Instructional objectives and specifications based on these requirements were developed to provide a guideline for future curriculum development.

### **FOREWORD**

This research and development was conducted under task area Z1176-PN (Individual Technical Training), work unit Z1176-PN.03 (Improved Performance Through Instruction in "A" School-related Basic Skills). The purpose of this work unit is to develop a job-oriented basic skills (JOBS) program that will enable lower-aptitude students to complete "A" schools successfully. The purpose of the current effort is to develop a JOBS program for the ratings in the acoustic sensor operations area. This report describes the front-end instructional analysis and development of this effort. Future reports will describe curriculum development and program evaluation.

Three previous reports (NPRDC TRs 81-24, 82-14, and 83-5) described program development and evaluation for the ratings in the operations, administrative/clerical, electricity/electronics, and propulsion engineering areas.

JAMES F. KELLY, JR. Commanding Officer

JAMES W. TWEEDDALE Technical Director

### SUMMARY

### **Problem**

In response to a widely predicted shortfall of high quality accessions in the 1980s, the job-oriented basic skills (JOBS) program was conceived in 1977 to compensate for skill deficits of lower aptitude personnel. During the last 5 years, prerequisite skill instructional material in four content areas was developed and evaluated. The JOBS potential for alleviating manpower shortages of technically trained personnel has encouraged the Navy to initiate development of JOBS programs in other content areas.

### Objective

The objective of the current effort is to develop a JOBS curriculum appropriate for the acoustic sensor operations area, which includes members in four ratings: ocean systems technician (OT), aviation antisubmarine warfare operator (AW), sonar technician, (surface) (STG), and sonar technician (submarine) (STS). The objective of the effort described herein was to ascertain job and basic/prerequisite "A" school requirements for these ratings.

### **Approach**

- 1. The OT, AW, STS, and STG ratings were job-analyzed to ascertain job requirements.
- 2. Basic and prerequisite skills analyses of the acoustic sensor operations class "A" schools were conducted to determine basic and prerequisite skills requirements.

### Finding and Conclusions

- 1. Analysis of AW, OT, STS, and STG job duties revealed that sensor operations for acoustic analysis and continued on-the-job study are critical job requirements.
- 2. The basic requirements for acoustic sensor operations consist of skills in mathematics, reading, study skills, and memorization.
- 3. The prerequisite requirements for the AW, OT, STS, and STG major "A" school topic areas are skills in science, conceptual understanding of mechanical operations and relationships, and problem solving.
- 4. Course objectives and instructional specifications were developed based upon the training requirements noted above.

### Recommendations

A JOBS curriculum in the acoustic sensor operations area should be developed based upon the objectives and instructional specifications presented herein.

### INTRODUCTION

### Problem and Background

The job-oriented basic skills (JOBS) program was conceived in 1977 in response to the widely predicted shortfall in high-quality accessions during the 1980s. The purpose of the program is to compensate for skill deficits of lower-aptitude personnel through the implementation of a prerequisite skill instructional program that may enable these students to complete the Navy's technical schools successfully and help diminish the shortage of technically trained personnel. Curricula for four content areas were developed during 1979 and 1980 (Harding, Mogford, Melching, & Showel, 1981). Evaluation of JOBS program success thus far indicates that the program has the potential for attenuating Navy technical manpower shortages and contributing to minority upward mobility (Baker & Huff, 1981; Baker & Hamovitch, 1983).

In July 1982, the Chief of Naval Education and Training (CNET) requested the Navy Personnel Research and Development Center (NAVPERSRANDCEN) to develop a JOBS curriculum appropriate for the acoustic sensor operations area, which includes members of four ratings: ocean systems technician (OT), aviation antisubmarine warfare operator (AW), sonar technician (surface) (STG), and sonar technician (submarine) (STS). Although members of these ratings all operate, analyze, and interpret data displayed on acoustic processing systems, they accomplish these responsibilities from different perspectives. OTs operate at shore-based naval facilities (NAVFACS), STGs and STSs conduct operations on board their respective ships, and AWs operate from land and sea-based aircraft.

### **Purpose**

The objective of this effort was to conduct the front-end instructional analysis necessary to develop a JOBS curriculum for the acoustic sensor operations area.

### **APPROACH**

### Job Analysis

Jobs performed by members of the four acoustic sensor operations ratings were analyzed to determine their extent of commonality and to ascertain the scope and importance of each. In addition, since it had been reported that OTs were successfully completing OT "A" School but later showed deficiencies on-the-job, the job analysis was also used to identify job requirements not covered in "A" school that could be addressed in the JOBS program.

During August and September of 1982, NAVPERSRANDCEN personnel interviewed and administered a job analysis survey to AW, OT, STG, and STS E-4s through E-7s assigned to the Navy Oceanographic Processing Facility; the Fleet Anti-Submarine Warfare Training Center, Pacific; or the Anti-Submarine Warfare Wing, Pacific. Since personnel assigned to the latter two activities included those currently performing shore-based duties (e.g., instructors), all respondents were requested to answer the survey as if they were under deployed conditions.

The job analysis survey consisted of items extracted from the required skills for E-4s to E-7s in the targeted ratings listed in Section I of the Manual of Navy Enlisted Manpower and Personnel Classifications and Occupational Standards (NAVPERS 18068D).

Participants were asked to rate each task on its level of importance and the percent of time spent performing the task. (Appendix A contains a sample of the survey used.)

Using descriptive statistics, analyses were conducted on the survey data for each rating. Table 1, which presents the job duties rated as critical by 70 percent or more of the respondents, shows that each rating has important job duties distinctive to its particular community. For example, AWs are responsible for general flight crew duties; and STGs, for both sonar equipment operation and repair responsibilities. Table 1 also reveals that OTs, STGs, and STSs rate detection and classification (sensor operations) as one of the more critical aspects of their jobs. However, small-group interviews, conducted after the surveys were completed, revealed that members of all four ratings regard sensor operation for acoustic analysis as their first priority. The reason for the discrepancy between AW survey and interview results, as explained by AWs from the helicopter community, is that, when they are deployed, much of their time is spent on search and rescue and other utility functions. This would account for the fact that job tasks involving sensor operations (i.e., detect, classify, and report sonar contacts and detect submarine evasive maneuvers) were rated as critical by only 62 percent of the AWs. In fact, the operation of sonar sensors to detect and classify contacts is an area of commonality across OT, STG, STS, and AW and is a critical aspect of their job responsibilities.

The interviews also provided the opportunity to obtain an estimate of basic skill needs and additional job requirements. Interviewees discussed observed deficiencies in the areas of mathematics, notetaking, general study skills, reading ability, and memorization. One of the job requirements mentioned concerns the maintenance of vigilance while monitoring acoustic processing systems during watch periods. Another is studying technical and intelligence publications to enable personnel to to increase their experience and remain current in their field. An on-the-job learning process necessitating continuous independent study may require additional learning skills.

### Basic and Prerequisite Skills Analyses

To determine the basic and prerequisite requirements of the acoustic sensor operations "A" schools, instructors of OT, AW, STS, and STG "A" and common core schools were interviewed using two surveys developed for use in small-group or individual interviews. The Basic Skills Survey, which was designed to elicit specific basic skill needs, consisted of explicit questions concerning basic skill deficiencies mentioned during the job analysis interviews. The Acoustic Prerequisite Skills Survey (APSS), which was designed to determine prerequisite requirements for acoustic detection and classification, was constructed by examining OT, AW, STG, and STS "A" school instructor and student guides. The major topic areas were extracted for each rating and those taught in all four ratings were included on the survey. A comparison of the final list of APSS topics with a commonality analysis conducted across acoustic platforms (airborne, submarine, and surface) (Robinson, Smith, & Thode, 1982) showed that the two concurred on the common subject matter that is taught among the acoustic communities. The APSS topics also agree with the detection and classification commonality revealed by the job analysis discussed previously. (Copies of the surveys are included in Appendices B and C.)

During the period between September and December 1982, interviews were conducted with (1) three common-core instructors from the Anti-Submarine Warfare Wing, Pacific, (2) four "A" school instructors from the Fleet Anti-Submarine Warfare Training Facility, Pacific, and (3) six "A" school instructors from the Fleet Anti-Submarine Warfare Training Facility, Atlantic. After the instructors were informed of the general background of the

Job Tasks Rated as Critical in Importance by 70 Percent or More of Survey Respondents

AW	ОТ	STG	STS
*Perform pre and post flight inspections	*Perform analysis and classifica- tions	*Operate sonar sensors: detect and classify	*Operate sonar sensors: detect and classify
Perform flight checks on survival equipment	*Determine target bearing	*Stand sonar watch	Report and record contacts
*Communicate on ICS circuits	Maintain plots and status boards	Conduct urgent ASW attack	*Stand sonar watch
Instruct personnel on tactical use of airborne ASW equipment	*Interpret opera- tional messages	Evaluate contact information and make tactical recommendations	Determine contact position
Instruct personnel in aircrew duties	Evaluate acoustic intelligence	Localize electronic equipment casual-ties	Analyze lofar contacts
*Supervise pre, post, and in- flight operation checks	Establish probability areas	*Supervise mainte- nance and repair of sonar equip- ment	Maintain, trouble- shoot, and repair sonar equipment
	*Determine contact position	*Evaluate opera- tional tests of ASW equipment	Determine optimum mode of sonar operation
	Coordinate use of ancillary equip- ment	Train, drill, and supervise A/S teams	

Note. Personnel indicated they spent the highest percentage of their time on these tasks marked by an asterisk.

JOBS program and the purpose of the interviews, they were provided with a copy of both surveys to facilitate discussion at to structive the interview session. Survey topics were discussed one at a time and the seponders, whether reached by group consensus or contributed individually, were reconstructed during the interview by the experimenter. Each interview session required approximately 1.5 hours.

#### RESULTS

### **Basic Skill Requirements**

Basic skill survey results indicate that entering "A" school students need some level of proficiency in the following areas:

- 1. Mathematics. This includes training in (a) making decisions concerning when to use subtraction, addition, multiplication, and division, (b) adding and subtracting negative numbers, (c) understanding percentages and the relationship between percents and decimals, (d) understanding ratios, and (e) working with equations or formulas. Requirements for knowledge of equations/formulas can be separated into three areas: (a) how to form an equation/formula, (b) how to transpose an equation/formula, and (c) how to solve linked equation/formulas (e.g., the answer from formula #1 is needed to solve formula #2). Since calculators are used in "A" school, performing basic computations by hand is not a requirement; however, knowing how to enter percentage values into the calculator may be.
- 2. Reading. The requirement for reading technical manuals has been alleviated to a large extent by the heavy "A" school emphasis placed on instructor lectures, notetaking, and studying from student notes. Although publication research and reading is necessary on-the-job, it is not required in the "A" schools.
- 3. Study skills. Notetaking and studying are major requirements in all four "A" schools. Since class notes are the main source of study and reference, students need to be effective notetakers. After-class study is highly recommended by instructors. However, since an classified material, including student notes on that material, must remain at the school house, student study time is restricted, making efficient study methods even more important. Understanding charts and/or graphs designed to be used as study aids is also a requirement.
- 4. <u>Memorization</u>. Students need to be able to memorize formulas and technical terms, including a preponderance of technical terms with the same meaning (propeller shaft, prop shaft, PS, SR).

### Prerequisite Skill Requirements

Group discussions of the APSS topics revealed the following acoustic skill pre-requisites:

- 1. Science. Students need to understand motion; sound generation and travel; effect of sound mediums on sound travel, wave patterns, and wavelengths; how to read scientific charts and graphs; and the structure of the ocean.
- 2. Conceptual understanding of mechanical operations and relationships. Students need to understand the basics of certain mechanical operations such as those involved in diesel, gas or turbine engines, drive shaft, and gear reduction, as well as the interrelationship of different parts of an engine.
- 3. Problem-solving techniques. These requirements encompass the ability to organize, categorize, and analyze a large quantity of very detailed and specific information.

### **Course Objectives**

Based on the training requirements revealed by the basic and prerequisite skills analyses, course objectives and sample test items were developed for the acoustic sensor operations JOBS strand. Table 2 presents a summary of the objectives. (Appendix D containes copies of the objectives and sample test items.)

Table 2
Summary of Objectives for the Acoustic Sensor
Operations JOBS Strand

Topic Area		Objective Title
Mathematics	1.0	Adding and subtracting negative numbers
	2.0	Converting decimals and percentages
	3.0	Expressing ratios
	4.0	Formulating word problems
	5.0	Transposing formulas
	6.0	Solving word problems
Study Skills	1.0	Notetaking
•	2.0	Memorization
	3.0	Reading comprehension
	4.0	Concentration management
Mechanical Operations	1.0	Enginesdiesel/gas
and Relationships	2.0	Identifying mechanical parts
•	3.0	Functions of mechanical parts
	4.0	Gearing mechanisms
	5.0	Turbines
	6.0	Mechanical relationships
Science	1.0	Production of sound
	2.0	Sound generation
	3.0	Sound wavelength
	4.0	Sound propagation and media
	5.0	Sound propagationterms
	6.0	Charts and graphs
	7.0	Graph design
	8.0	Structure of the ocean
Problem Solving	1.0	Five-step problem-solving method
-	2.0	Tree diagram problem solving
	3.0	Vigilance

### Instructional Specifications

Based upon the course objectives and the basic and prerequisite requirements, instructional specifications were developed for each of the terminal objectives. These specifications, which were designed to provide guidelines for curriculum development and classroom instruction, are contained in Appendix E.

### **RECOMMENDATIONS**

It is recommended that a JOBS curriculum in the acoustic sensor operations area be developed based upon the objectives and instructional specifications presented herein.

BASIC SKILLS SURVEY

### **BASIC SKILLS SURVEY**

### Area: Mathematics

- 1. Do students experience difficulty with:
  - a. Addition, subtraction, multiplication, division?
  - b. Simple equations?
  - c. Solving formulas?
  - d. Translating problems into equations?
- 2. What equations or types of equations are the most difficult for students to solve?
  - 3. Are students required to use any of the following:

Geometry? Fractions?

Decimals?

Ratios?

Percentages?

- 4. With which of the math topic areas listed in question 3 do students experience difficulty?
  - 5. Are students allowed to use calculators in school?
- 6. Do they know how to use calculators? (If no, list problems you have experienced.)

### Area: Reading

- 1. Do students experience difficulty with: (provide examples)
  - a. Simple sentence decoding?
  - b. Basic vocabulary?
  - c. Technical vocabulary?
  - d. Decoding technical material?
  - e. Searching publications for specific formulas or intelligence information?
- 2. Would a concise vocabulary and/or acronym list help the students to decode technical material more effectively?

### Area: Study Skills

- 1. How many hours are students required to spend studying?
- 2. Are the students provided with in-class study time?
- 3. Are students provided with study areas (i.e., study hall)?
- 4. What type of notetaking format do the students use?
- 5. Do the students prefer to study from their notes or their textbook?
- 6. Do students use their notes or their textbook as a reference when they seek information to solve a problem?
- 7. When students seek information, do they use their text or the instructor as a resource?
- 8. Are the students given study skills training in "A" school? (If yes, describe the training briefly and the results.)

### Area: Vocabulary and Memorization

- 1. How is technical vocabulary usually taught?
- 2. What percentage of the terms are students required to memorize?
- 3. Are the students required to accomplish term learning on their own?
- 4. What percentage of a student's training requires memorization?
- 5. What type of material are the students required to memorize? (i.e., technical terms, formulas)
  - 6. Are memorization strategies taught in the classroom?

### Area: Classification or Analysis

- 1. Can you identify specific problem areas that students have during the classification process?
  - 2. What phase of analysis is the most difficult for students to grasp?

# APPENDIX C ACOUSTIC PREREQUISITE SKILLS SURVEY

3. Beta	Disc a, and	cuss the prerequisites for classification techniques such as the five-step method, delimination techniques.	
	Died		
4.	DISC	cuss the prerequisites for active and passive tracking techniques.	

# APPENDIX is TERMINAL OBJECTIVES AND SAMPLE TEST ITEMS

Area	Page
Mathematics	D-1
Study Skills	D-9
Science	D-15
Mechanical Operations and Relationships	D-27
Problem Solving	D-35

### MATHEMATICS

### Adding and Subtracting Negative Numbers

OBJECTIVE 1.0 Given a set of mathematical problems, be able to add and subtract negative numbers (without a calculator). The standard is 90%.

SAMPLE TEST ITEMS:

Add the following negative numbers.

Subtract the following negative numbers.

### Converting Decimals & Percentages

OBJECTIVE 2.0 Given a list of numbers expressed as decimals or percentages, convert the decimal numbers into percentages and the percentages into decimal numbers with 90% accuracy.

### SAMPLE TEST ITEMS:

Convert the following decimals to percentages.

- 1. .56=
- 2. 1.31=
- 3. .6 =
- 4. .02=
- 5. .003=
- 6. .811=

Convert the following percentages to decimals.

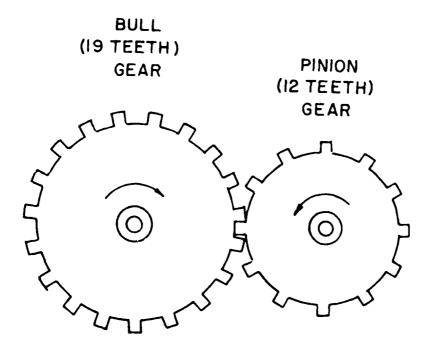

- 7. 95%=
- 8. .666%=
- 9. 200%-
- 10. 25.5% =
- 11. 6%=
- 12. 150.5%=

### Expressing Ratios

OBJECTIVE 3.0 Given two items to be compared, express the relationship between the items as a ratio and provide the solutions as a decimal value to the nearest 10th. The standard is 90%.

### SAMPLE TEST ITEMS:

- 1. There are 210 girls and 115 boys attending Broadway Elementary School. What is the ratio of girls to boys?
- 2. Express the relationship between the Bull gear and the Pinion gear as a ratio.

### Formulating Word Problems

OBJECTIVE 4.0 Given word problems with one unknown value, be able to formulate an equation expressing the relationship stated in the word problem and then solve the equation for the unknown value.

The standard is 90%.

### SAMPLE TEST ITEMS:

1. A man drove 60 MPH to visit his friend. It took him 3 1/2 hours to get there. How many miles away does his friend live?

2. The cooling fan on an engine rotates twice as fast as the crankshaft. If the crankshaft is rotating at 3,000 RPMs, how many revolutions does the cooling fan make in 15 minutes?

3. A light is flashed on and off 200 times in 12 seconds. What is the frequency of the flash?

### Transposing Formulas

OBJECTIVE 5.0 Given various algebraic formulas, be able to transpose the formulas to solve for a requested value. The standard is 90%.

SAMPLE TEST ITEMS:

1. Solve for R

$$TD = \frac{L}{R}$$

2. Solve for L

$$f_{co} = \frac{R}{2}$$

3. Solve for I

$$I^2 = \frac{P}{R}$$

4. Solve for f

$$\lambda = \frac{y}{f}$$

5. Solve for  $E_3$ 

$$E_1 = E_T - E_2 - E_3$$

6. Solve for I

$$P = I X E$$

### Solving Word Problems

OBJECTIVE 6.0 Given a word problem that requires the manipulation of two formulas. be able to solve both formulas to obtain the problem's solution. The criterion is 90%.

### SAMPLE TEST ITEMS:

1. If a car's tire is 3 feet in diameter and completes 560 revolutions in one minute (RPM), what is the speed of the car? (answer in miles per hour, MPh)

Formulas:  $C = \mathcal{H} D \quad (\mathcal{H} = 3.14)$  C=Circumference

S= C X RPM D=Diameter

S=Speed

### ANSWERS TO THE SAMPLE TEST ITEMS

OBJECTIVE	SAMPLE TEST ITEM	ANSWER
1.0	1	-28
	2	-100
	3	-49
	4	-86
	5	-4
	6	42
	7	-23
	8	13
2.0	1	56%
	2	131%
	3	60%
	4	2%
	5	.3%
	6	81.1%
	7	.95
	8	.00666
	9	2.0
	10	.255
	11	.06
	12	1.505
• •	_	2:1 = 2
3.0	1	
	2	19:12 = 1.58

OBJECTIVE	SAMPLE TEST ITEM	ANSWER
4.0	1	D=S X T
		D=60X3.5
		D=210
	2	$R=(RPM \times M) \times 2$
		R=(3000X.25) X 2
		R=1500
	3	FPM=(200 X R) R=60-12 ; R=5
	J	FPM=20 <b>0</b> X 5
		FPM=1000
		2000
5.0	1	R= <u>L</u>
3.0	_	TD
	2	L= <u>R</u> 2πF <sub>co</sub>
	3	$I = \frac{P}{R}$
	4	
	•	$f = V \over \overline{\lambda}$
	5	$E_3 = E_1 - E_2 - E_1$
	6	I= <u>P</u> E
6.0	1	a) C=ND
	<del>-</del>	C=3.14X3
		C=9.42 ft/Rev
		b) S=C X RPM
		S=9.42 X 560
		S <b>=\$</b> 275 ft/min

## STUDY SKILLS

## Notetaking

OBJECTIVE 1.0 Given a written passage, the learner will demonstrate notetaking techniques by listing main and supporting ideas in an abbreviated format or using the networking strategy.

### SAMPLE TEST ITEM:

Read and take notes on the passage below. Either list the main and supporting ideas in an abbreviated format, or use the networking strategy.

Sound travels in the form of waves which may be classified as transverse or longitudinal. A transverse wave is one in which the particles of the medium through which the wave is passing move at right angles vertically to the wave's direction. In a longitudinal wave, the particles move back and forth along the wave's direction of travel, resulting in compression and rarefaction of the wave.

## Memorization

OBJECTIVE 2.0 The learner will be able to list the steps associated with each of the following mnemonic techniques: pegword, association chain, story and pattern.

## SAMPLE TEST ITEM:

1. List the steps involved in using the association chain method to memorize material.

## Reading Comprehension

OBJECTIVE 3.0 The learner will be able to list the steps involved in the questioning and problem solving methods.

## SAMPLE TEST ITEM:

1. List the steps involved in the questioning method.

## Concentration Management

OBJECTIVE 4.0 Given a scenario of a stressful situation, the learner will recommend and illustrate the use of either the self-talk or relaxation technique for creating a more positive mood.

### SAMPLE TEST ITEM:

Read the following scenario. Using either the self-talk or relaxation technique, explain how Tom could create a more positive mood for studying.

## Scenario

Tom is thinking about his father as he sits down to study. He is upset because of an arguement they have just had.

### ANSWERS TO THE SAMPLE TEST ITEMS

OBJECTIVE 1.0 Using the main and supporting ideas strategy:

main idea: sound travels in waves

supporting ideas: transverse = particles

move at right angles

vertically

- OBJECTIVE 2.0 1. List the mental associations that come to mind when you think about the material to be remembered.
  - Determine if any of the mental associations in step 1 lead you, by a chain of associations, to the material to be remembered.
  - 3. Be sure that the association you formulated makes it possible to differentiate between other, similar material.
  - 4. Write the mnemonic out for yourself to make the chain of associations clear.
- OBJECTIVE 3.0 1. Read the paragraph and determine the main idea.
  - Make up a question that asks for an example of the main idea of the paragraph.
  - 3. Learn the answer to the question you made up.
- OBJECTIVE 4.0 Tom should talk to himself and resolve his conflict with his father in his mind, "I'm angry because I feel he didn't understand what I was trying to say. I need to express myself more clearly and calmly. Right now I have to study. I will pick a time later on and speak to Dad rationally. Right now I'll clear my mind and study".

## SCIENCE

### Production of Sound

OBJECTIVE 1.0 Given a short answer test, be able to list and define the three basic elements that are necessary before sound can be produced.

The criterion is 100%.

## SAMPLE TEST ITEM:

1. What three basic elements must be present before sound can be produced? List each element and give a brief definition.

## Sound Generation

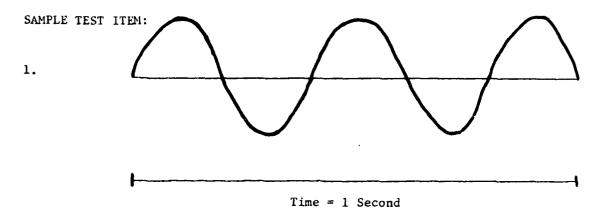

OBJECTIVE 2.0 Using the tuning fork as an example, the student will write a short answer explanation of sound generation. The answer must contain motion/vibration, sound waves and medium.

### SAMPLE TEST ITEM:

1. The tuning fork is one example of a sound source. Explain in 3 or 4 sentences the process of sound generation using a tuning fork.

## Sound Wavelengths

OBJECTIVE 3.0 Given a diagram of a wave pattern, be able to label parts of the diagram to illustrate cycle, wavelength, amplitude, and frequency. The criterion is 90% of the items labeled correctly.

## Sound Propagation & Mediums

OBJECTIVE 4.0 Given a short answer test, be able to answer questions on the relationship between sound mediums and sound propagation. The standard is 90%.

### SAMPLE TEST ITEM:

1.	A sound made	in	the	ocean	will	travel	than a	a	sound	made	in
	fresh water.						(faster/slower)				

- 2. A sound made at the surface of the ocean will in speed as it approaches the ocean floor. increase/decrease
- 3. What will happen to a sound made under the surface of the ocean as it strikes a smooth ocean surface?
- 4. If a beam of sound in the ocean is traveling from a warm temperature near the surface to a cold temperature, 100 ft. below the surface, what will happen to the sound beam?
- 5. Will a sound travel faster on a clear night or a foggy night?
- 6. Will sound travel faster through water or metal?
- 7. What is the effect of ocean's temperature on the transmission of sound waves?
- 8. What effect does the ocean's salinity have on sound travel?
- 9. What effect does pressure have on the transmission of sound waves in the ocean?

## Sound Propagation - Terms

OBJECTIVE 5.0 Given a list of sound propagation terms and definitions, be able to match the term with the correct definition. The criterion is 90%.

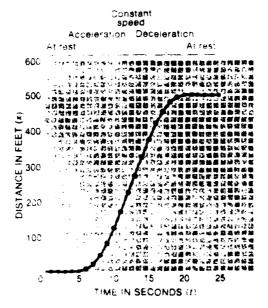

SAMPLE TEST ITEM:		
l. reflection	a)	a unit of frequency equal to one cycle per second
2. frequency		
3. velocity	b)	transmitted sound rays striking an abrupt surface and are returned at the same angle
4. hertz	c)	a vector quantity including magnitude and direction in relation to a given frame of reference
5. refraction		
6. wavelength	d)	the bending or curving of a sound ray when it passes from one sound velocity region to another
	e)	the distance between points of corresponding phase of two consecutive cycles
	f)	rate of vibration of a sound source

## Graphs & Chart.

OBJECTIVE 5.0 Given a graph or chart, be able to interpret the data displaced. The standard is 90%.

SAMELE TEST ITEM:

FIGURE 1. car motion from start to sto;

- of the samulately, how look did it take the same to travel 300 feet?
- ... How far lid the car travel to with 10 and 20 seconds?

Table I Major Subdivisions of the Ocean

Ocean	Area in sq.mi.	Mean depth in feet
Arctic	5,427,000	5,010
North Atlantic	17,646,000	10,780
South Atlantic	14,098,000	13,420
North Pacific	31,639,000	14,050
South Pacific	32,361,000	12,660
Indian	28,400,000	13,002
Southern (Antarctic)	12,451,000	12,240

- 3. Which ocean has the smallest area?
- 4. Which ocean (or ocean area) is the deepest?

# Graph Design

OBJECTIVE 7.0 Given a blank graph showing an X and Y axis and a set of data, be able to label each axis and plot the data on the graph. The standard is 100% of the data plotted correctly.

## SAMPLE TEST ITEM:

1.	Depth (feet)	Temperature (OF)
	surface	68
	5	65
	10	62
	15	58
	20	55
	25	50

## Structure of the Ocean

OBJECTIVE 8.0 Given a short—answer and multiple—choice test, be able to demonstrate knowledge of the structure of the ocean. The criterion is 90%.

SAMPI	Æ.	TEST	ITEM:

1.	The continents are surrounded by a shallow submerged zone called a
2.	Canyons which cut across the continental shelf and down the continental slope are called
3.	are volcanic peaks that do not reach the surface of the ocean.
4.	Which of the following has the deepest ocean trenches?
	A. Atlantic Ocean B. Pacific Ocean C. Arctic Ocean D. Indian Ocean
5.	Which of the following is a longer distance from sea level?
	<ol> <li>Mt. Everest</li> <li>Deep ocean area (Mariana's deep)</li> </ol>
6.	The ocean ridges were most likely formed by
7.	Most continental shelves consist of:
	1 Coral rock

2. Stony, waterworn cobbles

3. Lava

4. Mud and Sand

## OBJECTIVE 8.0 (cont.)

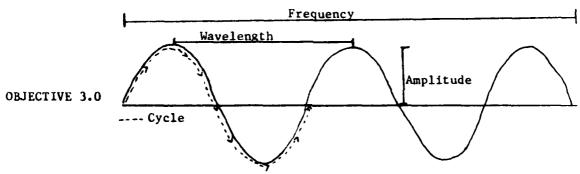

8.	The total amount of dissolved salt in sea water is termed
9.	The density of sea water is determined by the,,
	and
10.	Ocean currents are a result of the combined effects of what two things?
	,

- 11. The temperature of the upper zone of the open ocean surface shows,
  - 1. constant stability
  - 2. seasonal variations
  - 3. no apparent pattern
  - 4. an increase in the Atlantic

### ANSWERS TO THE SAMPLE TEST ITEMS

- OBJECTIVE 1.0 The three basic elements are: a source of sound, a medium to transmit the sound (e.g. air, water), and a detector to hear the sound (e.g. ear).
- OBJECTIVE 2.0 After a tuning fork is struck it begins to vibrate back and forth. This motion generates sound waves through the air.

  When the sound waves are received by the human ear it 'sounds' like a tone.

- OBJECTIVE 4.0 Item 1: faster
  - Item 2: increase
  - Item 3: reflected towards the ocean bottom at an angle nearly equal to the angle of incidence (when it struck the surface).

  - Item 5: foggy night
  - Item 6: metal
  - Item 7: the speed of sound increases with increasing temperature
  - Item 8: an increase in the salinity will increase the speed of sound (the saltier the water the faster sound travels)
  - Item 9: sound travels faster as water pressure increases

Item 2: f

Item 3: c

Item 4: a

Item 5: d

Item 6: e

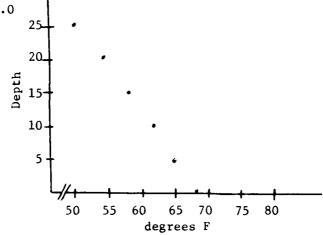

## OBJECTIVE 6.0 Item 1: 13.5 seconds

Item 2: 480 feet

Item 3: Arctic

Item 4: North Pacific

OBJECTIVE 8.0 Item 1: continental shelf

Item 2: submarine canyons

Item 3: sea mounts

Item 4: B

Item 5: 2

Item 6: volcanic action

Item 7: 4

Item 8: salinity

Item 9: temperature, salinity, and pressure

Item 10: thermohaline motions and wind motions

Item 11: 2

# MECHANICAL OPERATIONS AND RELATIONSHIPS

## Engine - Diesel/Gas

OBJECTIVE 1.0 Given a series of true/false statements concerning gas and diesel engines, the learner will determine whether each statement is true or false. The criterion is 90%.

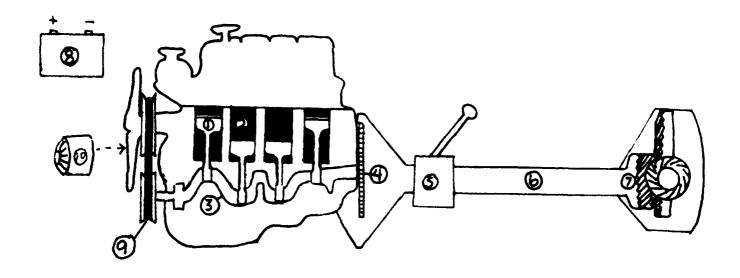

### SAMPLE TEST ITEMS:

- 1. Spark plugs ignite fuel vapor in a diesel engine.
- 2. Generally speaking, gasoline engines are quieter than diesel engines.

## Identifying Mechanical Parts

OBJECTIVE 2.0 Given a diagram of a car's engine, drive shaft, and electrical auxiliaries, the learner will label the following parts: Piston, Alternator, Cylinder, Crankshaft, Flywheel, Transmission, Fan-Belt, Drive shaft, Differential and Battery. The standard is 90%.

SAMPLE TEST ITEMS: Label each part according to its number on the diagram below.

1.	<b>(</b> , .
** •	ī.
).	5.
• •	9.
5.	10.

## Functions of Mechanical Parts

OBJECTIVE 3.0 Given a list of mechanical parts and a list of functions, the learner will match the part with its function. The standard is 90%.

SAMPLE	TEST	ITEMS:	Match each performs.	part	listed	bel	low with	the function which it
<del></del>	1.	Pisto	n			Α.	Smooths	out action of the pistons.
	2.	Crank	shaft			<b>a.</b>	1 4 4 1	
	3،	Cylin	der			В.	Stores 6	electrical energy
	4 .	Batte	ry			с.	Allows v	wheels to turn independently
	5.	F1ywh	Flywheel				• • • • • •	
	6.	Diffe	rential		<b>D.</b>		Replaces lost battery energy	
- <u> </u>	7.	Alter	nator			E.	-	ses fuel vapor into chamber thrust down by explosion
	8.	Drive	Shaft				and 15	thrust down by expression
	9	. Transı	mission			F.	Chamber	where explosion takes place
	10	. Fan b	elt			G.		art of the engine's energy alternator
						н.		power from the front of to the rear of the car

J. Changes gears

drive shaft

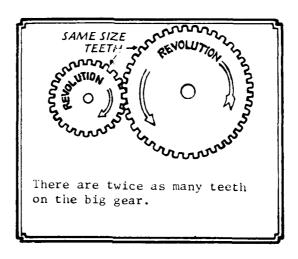

I. Takes energy from the up-and-down movement of the pistons and changes it into a rotational force down the

## Gearing Mechanisms

OBJECTIVE 4.0 Given a short answer test, be able to answer questions on the function of gearing mechanisms and gear reduction. The standard is 90%.

SAMPLE TEST ITEM:

1.

How many times does the little gear turn in relation to the big gear?

2. What general mechanism translates the round and round movement of a car motor into the round and round movement of the wheels?

### Turbines

OBJECTIVE 5.0 The learner will briefly describe the operation of a turbine.

Attributes required for full credit include: a. force coming in contact with blades, b. spinning action of blades, c. torque energy carried by turbine shaft.

## SAMPLE TEST ITEM:

1. Briefly describe the operation of a turbine. Include sketches if necessary.

## Mechanical Relationships

OBJECTIVE 6.0 Given a list of mechanical parts to be able to identify which of the following categories it belongs to: prime mover, drive or gearing system, propulsion system, or auxiliary.

## SAMPLE TEST ITEM:

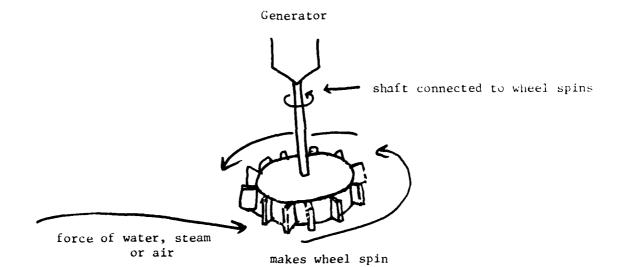

Match the mechanical part with the correct category.

1.	Battery	Α.	Prime Mover
2.	Drive Shaft	В.	Drive or Gearing System
3.	Cylinder	с.	Propulsion System
4.	Propeller blades	р.	Auxiliary
5.	Alternator		
6.	Transmission		
7.	Differential		
8.	Car wheels		
9.	Piston		

## ANSWERS TO THE SAMPLE TEST ITEMS

OBJECT IVE	SAMPLE TEST ITEM	ANSWER
1.0	1	False
	2	True
2.0	1	Piston
	2	Cylinder
	3	Crankshaft
	4	Flywheel
	5	Transmission
	6	Driveshaft
	7	Differential
	8	Battery
	9	Fan belt
	10	Alternator
3.0	1	E
	2	I
	3	F
	4	В
	5	A
	6	С
	7	D
	8	н
	9	J
	10	G
4.0	1	The little gear turns
		twice as the big
		gear turns once
	2	gears

OBJ ECT IVE	SAMPLE TEST ITEM	ANSWER
5.0	1	Steam, water or air pushes against blades on a wheel. The wheel then turns sending energy up through a shaft to a generator

6.0	ITEM	ANSWER
	1	D
	2	В
	3	Α
	4	С
	5	D
	6	В
	7	В
	8	C
	9	A

### PROBLEM SOLVING

## Five-Step Problem-Solving Method

OBJECTIVE 1.0 Given a set of verbal reasoning problems to solve, the learner will apply the 5-step problem solving method. This objective will be achieved when the learner solves 90% of the problems, and illustrates how he/she applied the 5-step problem solving method.

### SAMPLE TEST ITEM:

- 1. Belvedere street is parallel to St. Anthony Street. Davidson Street is perpendicular to River Street. River Street is parallel to St. Anthony Street. Is Davidson Street parallel or perpendicular to Belvedere Street?
- 2. It is your job to plan the Watch Bill for standing watch in the work shop from Monday through Friday. Using the schedule of availability below, assign each man a day (8 AM to 5 PM) to stand watch. (Note: you cannot assign any of the men more than one watch day.)
  - Man 1 is returning from leave at noon on Thursday.
  - Man 2 is assigned to special training from Tuesday through Friday.
  - Man 3 has a legal appointment Monday, Wednesday and Friday afternoons.
  - Man 4 is receiving medical treatment on Monday, Tuesday and Wednesday mornings.
  - Man 5 is available all week.

## Tree biagram Problem Schwing.

CBJECTIVE 2.0 Given problems requiring progres ive analysis, the learner will apply the decision tree problem solving stratesy. The objective will be achieved when the learner illustrates how he/she applied the decision tree strategy for a minimum of three levels.

SAMPLE TEST ITEM:

1. Use the tree diagram strategy on the problem below.

John must decide whether to accept a job offer as a sales clerk. Should be accept the job!

2. A condition triend of rours to doing some work on a Navy base. He's been busing a problem distinguishing the rate/rank to ignia worn by Navy reasonnel, ise the tree discommentated to help him determine: who is a seamon; who is a petty officer, and who is an efficer. (Use the store insignia only).

## Vigilance

OBJECTIVE 3.0 Given a forty minute vigilance task, the learner will participate in the task and then graph his/her vigilance performance.

## SAMPLE TEST ITEM:

Scan the symbols on the next two pages very carefully. Everytime you encounter the symbol '  $\Gamma$  ' circle it.

## ANSWERS TO THE SAMPLE TEST STEPS

### OBJECTIVE 1.0 5-Step Method

## 111N 1:

- Step 1 This problem can be solved!
- step 2 The specific problem is: "Is Davidson Street, parallel or perpendicular to Belvedere Street"? To solve the problem you must know the relationship of the streets to each other.
- Step 3 Don't jump to conclusions start at the beginning and work through the problem.
- Step 4 Begin breaking the problem into manageable parts:
  - A. Belvedere St. is parallel to St. authory St.
  - 5. Davidson at. help rependential to given St.
  - c. River St. is parament to St. Anthony St.

Recheck to make sure the breakdown is correct.

- Step o Diagram the breakdown
  - A. Belvedere is juraffel to St. Anthony

Belvedeti		
et. Anthon		

- C TUICTION
- b. In relations' to been pavided and kiver to belyeque and St. Anthony is unknown at the time so the Step B temporarily.
- 4. River is parallel to st. Anthen

belvedere	
St. Anthony	
A. Weit	

D. Now, return to Step B. Can it be worked out now?

Belvedere	Davı
St. Anthony	dson
River	-

- E. Recheck the problem. Is it solved correctly?
- F. Yes. The answer to the question posed in Step 2 is: Davidson St. is perpendicular to Belvedere.

## ITEM 2:

- Step 1 This problem can be solved!
- Step 2 The specific problem is: To plan the watchbill so that each man serves watch only one day.
- Step 3 Don't jump to conclusions work out a schedule step by step to pick the best day for each man.
- Step 4 and
- Step 5 The schedule is already listed, but it can be organized by writing the available days on a calendar.

Α.

M	T	W	Th	F
MAN 2	MAN 3		MAN 3 MAN 4	MAN 1 MAN 4
MAN 5	MAN 5	MAN 5	MAN 5	MAN 5

Man l is only available on Friday

Man 2 is only available on Monday

2)	M	T	W	Th	F	
	MAN 2				Man l	

- 3) Man 3 is available on Tuesday and Thursday, so skip him temperarily and check on availability of Man 4 and 5.
- 4) Man 4 is available Thursday and Friday, but Man 1 is already assigned to Friday, so Man 4 is assigned to Thursday.

M	T	W	Th_	F
MAN 2			MAN 4	MAN 1

Go back to Man 3. Since Thursday has been assigned to Man 4, Man 3 is assigned Tuesday.

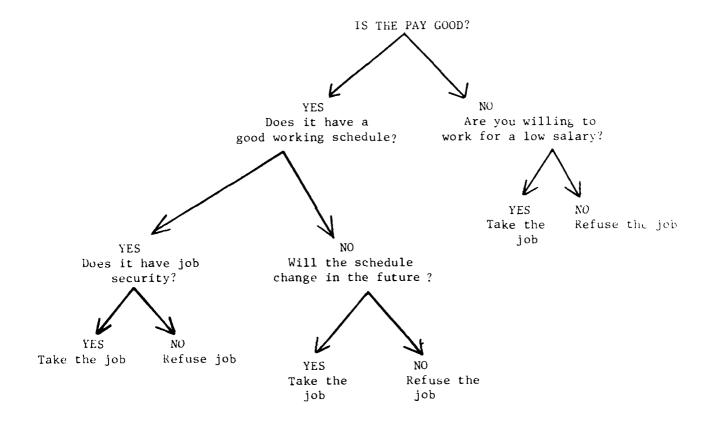

<u>M</u>	T	W	<u>T</u> h	F
MAN 2	MAN 3		MAN 4	MAN 1

- 6) Man 5 is available all week, but none of the other men are available on Wednesday
  - B. The answer to the problem is:

M	T	W	Th	F
MAN 2	MAN 3	MAN 5	MAN 4	MAN 1

## OBJECTIVE 2.0 TREE DIAGRAM METHOD

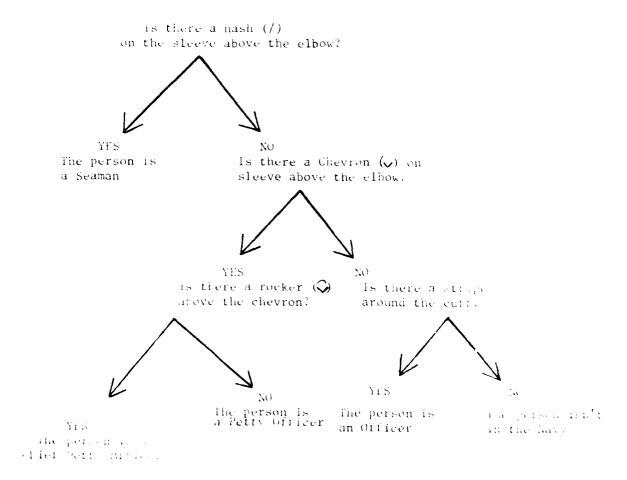

Item 1: Should he accept the job?

## <u>1</u>TEN 2:

2. A civilian friend of yours is doing some work on a Navy base. he's been having a problem distinguishing the rate/rank Insights wern by Navy personnel. Use the tree diagram method to help him determine: who is a seaman; who is a petty officer; and who is an officer. (Use only the sleeve Insignia).

ANSWER: Item 2

# MATHEMATICS

# Introduction

The Basic Skills Analysis revealed several math prerequisite requirements, including: adding and subtracting negative numbers, converting decimals and percents, expressing ratios, and solving formulas (or equations). Sensor operators need to know how to formulate equations/formulas from the data received, and how to manipulate formula/equation variables to arrive at a solution. This requires a knowledge of how to use and manipulate negative numbers, ratios, percents, and decimals.

# Major Topic Areas

# Adding and Subtracting Negative Numbers

# Objective

1.0 Given a set of mathematical problems, be able to add and subtract negative numbers (without a calculator). The standard is 90%.

# Objective Type

Rule use unaided.

# Instructional Media/Method

Lecture and Print.

# Strategy Specifications

N/A

# Instance Specifications

Тур	es of Operation	Example	Practice	Test
Add	ing Negative Numbers			
1.	Column format a) two addends b) three addends	1	3 3	ر 3
2.	Row format a) two addends b) three addends	1	3 3	3
Sub	tracting Negative Numbers			ļ
1.	Column format  a) 1 minuend and 1 subtrahend  b) 1 minuend and 2 subtrahends	1 1	3 3	3 3
2.	Row format  a) 1 minuend and 1 subtrahend  b) 1 minuend and 2 subtrahends	1	3 3	<b>3</b> 3

# Testing

The objective will be tested by giving the students a set of negative number problems to solve.

# Converting Decimals & Percentages

# **Objective**

2.0 Given a list of numbers expressed as decimals or percentages, convert the decimal numbers into percentages and the percentages into decimal numbers with 90% accuracy.

# Objective Type

Rule use unaided.

# Instructional Media/Method

Lecture and Print.

# Strategy Specifications

N/A

# Instance Specifications

Cor	verting Decimals to	Percents	
Type of Decimal Numbers	Example	<u>Practice</u>	Test
1. One digit decimal number	1	2	2
<ul><li>Two digit decimal number</li><li>a) with leading zeros</li><li>b) without leading zeros</li></ul>	1 1	2 2	2 2
<ol> <li>Three digit decimal number</li> <li>a) numbers on right and left side of the decimal point</li> </ol>		2	3
b) numbers all on the right side of the decimal point	: 1	2	3
(	Converting Percents	to Decimals	
Types of Percents			
1. One digit percent	1	2	2
<ul><li>Two digit percent</li><li>a) with a decimal point</li><li>b) without a decimal point</li></ul>	1 1	2 2	2 2
<ul><li>3. Three digit percent</li><li>a) with a decimal point</li><li>b) without a decimal point</li></ul>	1 1	2 2	2 2

# Testing

The objective will be tested by presenting the students with a series of percents to be converted to decimal numbers and decimals to convert to percents.

# Expressing Ratios

# Objective

3.0 Given two items to be compared, express the relationship between the items as a ratio and provide the solution as a decimal value to the nearest 10th. The standard is 90%.

# Objective Type

kule use unaided.

# instructional Media/Method

Lecture and Print.

# Strategy Specification

Sensor operators work with your reduction failes and the drive shart to propeller ratios constantion immenever possible ratio examples and practice exercises should be an included.

# instance Specification

2	
-4	
_	2

# 4 - 134 4 -

The apportive will be read to also the value of a periodic and express as as wears.

#### Formulating Word Problems

#### Objective

4.0 Given word problems with one unknown value, be able to formulate an equation expressing the relationship stated in the word problem and then solve the equation for the unknown value. The standard is 90%.

#### Objective Type

Rule use unaided.

#### Instructional Media/Method

Lecture and Print.

#### Strategy Specifications

Kalmykova (1975) presents the following steps for solving mathematical word problems:

#### 1. Emphasize proper reading of the problem.

Each problem needs to be read aloud with the proper intonation emphasizing each word and using the punctuation to help understand the problem. Practice exercises should involve each student reading word problems aloud and having the class critique the reading.

#### 2. Breakdown the text.

After reading the problem, each of the datum, especially the unknown, should be enumerated. Identify unfamiliar words and define them. To get a more detailed picture, questions should be asked, such as: what kind of widgets or how many.

# 3. Emphasize the differentiation of concepts.

The operational vocabulary of the word problem needs to be translated into mathematical terminology. For example; "I have \$5.00. How much money will I have if I receive 10 more dollars?" would be changed to "How much money will I have if I ADD 5 dollars to 10 dollars?" Practice exercises should include drills translating vocabulary to match operations so that students will learn to differentiate similar concepts, such as more than, greater than, and so many times bigger than.

# 4. Emphasize substantiation of the method of solving the problem from the text.

Choices of operation are controlled when they are verified in the text. For example, if a student wants to subtract 6 logs from 10 logs, the student must show which section of the problem indicates that the operation is necessary.

# 5. Emphasize the question of the word problem.

Students need to understand that the goal of the problem is to answer the question and solve the unknown. Practice exercises should include different questions requiring the same mathematical operations. For example: John bought 20 notebooks and gave half to his sister. 1) how many notebooks did John have left? 2) What is one-half of the notebooks equal to? 3) how many notebooks did John give his sister?

# 6. Emphasize analysis of solution errors.

Part of the learning process involves students analyzing their errors. Using the practice exercises students should help each other analyze problem solving errors.

# Instance Specifications

Type of Word Problem	Example	Practice	Test
1. Solving for 1 unknown	3	8	6

#### Testing

The objective will be tested by having the students formulate an equation and provide a solution to a set of word problems.

#### Transposing Formulas

#### Objective

5.0 Given various algebraic formulas, be able to transpose the formulas to solve for a requested value. The standard is 90%.

#### Objective Type

Rule use unaided.

#### Instructional Media/Method

Lecture and Print.

#### Strategy Specifications

Most of the formulas that sensor operators use involve two known values and one unknown. Bogolyubov (1972) suggests that many questions should be asked about each problem. This would require the student to manipulate the problem variables and solve for various unknowns. For example, "If 2 lbs of cherries cost \$5.00, how much would 15 lbs cost?" This problem is based on the common premise of price, quantity, and cost. In this case, cost and quantity are known and price is the unknown. Students should then be asked to solve, "If 2 lbs of cherries cost \$5.00 and John paid a total of \$37.50, how many pounds of cherries did John buy?" The second question requires the students to transpose the problem's solution and solve for quantity, with price and cost as givens. The third question would naturally require the student to solve for cost with quantity and price unknown.

Since acoustic sensor operators primarily use three variable formulas, there should be a heavy instructional emphasis on transposing three variable problems. For example, another common premise that would be particularly appropriate for acoustic sensor ratings is distance, time and speed.

The previous discussion has primarily emphasized the concept of equation transformation. This segment of instruction should also cover the mechanical operations that are necessary to transpose variables to either side of the equal sign to solve the equation.

#### Instance Specifications

Type of Operation Required to Transpose Formula	is <u>Example</u>	Practice	iest
1. Addition	2	3	· <b>4</b>
2. Subtraction	2	3	••
3. Multiplication	2	3	4
4. Division	2	3	•

#### lesting

The objective will be tested by providing students with a series of algebraic formulas to transpose to solve for a requested value.

# \_STUDY SKILLS

# Introduction

The application of good study skills is fundamental to success in many learning situations. The results of questionnaires and personal interviews conducted among the AW, STG, STS and OT Acoustic Sensor Operation Communities indicated that study skills is an area that needed improvement. Emphasis will be placed on the following four areas: reading comprehension, memorization, concentration management and notetaking. Instruction in these four areas should improve "A" school performance and ultimately their assignment in the fleet.

# Major Topic Areas

#### Notetaking

# Objective

1.0 Given a written passage, the learner will demonstrate notetaking techniques by listing main and supporting ideas in an abbreviated format or by using the networking strategy.

# Objective Type

Rule use unaided.

#### Instructional Media/Method

Print and Lecture.

# Strategy Specifications

The steps involved in using the notetaking technique of listing the main and supporting ideas in an abbreviated format are:

- 1. Determine the main idea.
- 2. Determine the supporting ideas.
- 3. Write the main and supporting ideas in an abbreviated format.

The steps involved in using the networking strategy are:

- 1. Read the material and write down the important words and ideas.
- 2. Note the relationships between the important ideas.
- 3. Network/organize the important information in your own style. For example the networks should highlight the important ideas and the relationship between them. This might include adding personal comments, diagrams, pictures or questions, anything that clarifies the material (Drobrovolny, McCombs, and Judd, 1980.)

#### Instance Specifications

Type of Notetaking	Examples	Practice	Test
1. Listing main and supporting ideas in an abbreviated format	3	4	2
2. Networking	3	4	-

#### Testing

The objective will be tested by demonstrating the notetaking techniques of networking and listing main and supporting ideas in an abbreviated format.

#### <u>Memorization</u>

#### Objective

2.0 The learner will be able to list the steps associated with each of the following mnemonic techniques: pegword, association chain, story and pattern.

# Objective Type

Remember rule.

#### Instructional Media/Method

Print and Lecture.

# Strategy Specifications

- 1. The steps involved in creating the pegword mnemonic are:
  - a. Learn a set of pegwords. The following list is an example of traditional pegwords, but other words could be substituted. The only requirement for pegwords is that they rhyme with the number they are associated with.

one is a bun two is a shoe three is a tree four is a door five is a hive six is a stick seven is heaven eight is a gate nine is a line ten is a hen

- b. Visualize each item to be memorized with a pegword. The following is an example of a pegword mnemonic: To remember that mega = 1,000,000 or 106, visualize a mega phone yelling at sticks. The "mega" is the prefix, and sticks is a pegword generally associated with 6, the number of zeros.
- 2. The steps involved in creating an association chain mnemonic are:
  - a. List the mental associations that come to mind when you think about the material to be remembered.
  - b. Determine the mental association in step 1 that led you, by a chain of associations, to the material to be remembered.
  - c. Be sure that the association you formulated makes it possible to differentiate between other, similar material.
  - d. Diagram the association you developed to make the chain of association clear. For example to memorize the word "density": density dense is he thick skulled more skull per unit volume than most people.

- 3. To breate a story mnemonic do the fall will :
  - information to be remembered. A skample, to remember that the colors of the flags signifying the flags signifying the flags meaning might be: Mrs. Flag who is 47, were her red and white blouse to the Valentine's Day dince.
- -. The Steps involved in societing a puttern unchouse are:
  - is learn the "key" is the aftern. This inverses recognizing the repetit. These that is the repetit the same of a committee of the repetit the same of the same of the same of the same of the repetit the same of the repetit the repetit the same of the repetit the repetit the repetit the repetit the repetit the same of the repetit the same of the repetit the same of the repetit the same of the same of
  - . State the one of the patern to wridity it in your mind.
- A protest and position of this colleted terms should to done loped. Students will, a liven the protest before classrood assimption on the conference and the coattest after instrucis complete. General information on anemonics see Braby and the 1978.

# Reading Comprehension

#### Objective

3.0 The learner will be able to list the steps involved in the questioning and problem solving methods.

# Objective Type

Remember rule.

# Instructional Media/Method

Print and Lecture.

# Strategy Specifications

The steps involved in using the questioning method on a paragraph are:

- 1. Read the paragraph and determine the main idea.
- 2. Make up a question that asks for an example of the main idea of the paragraph.
- 3. Learn the answer to the question you made up.

The steps involved in using the problem solving method are:

- 1. Determine the nature of the problem.
- 2. Gather additional information to simplify the problem.
- 3. Check the conclusion you came to, and correct it if necessary.

# Instance Specifications

#### Concentration Management

# Objective

4.0 Given a scenario of a stressful situation, the learner will recommend and illustrate the use of either the self-talk or relaxation technique for creating a more positive mood.

#### Objective Type

Rule use unaided.

# Instructional Media/Method

Print and Lecture.

# Strategy Specifications

The steps involved in using the self-talk method to create a mcre positive mood are:

- Determine what is bothering you, what is interfering with your positive study mood.
- 2. Talk yourself into a good study mood by addressing the problem you determined in step 1 and finding some way to solve it.

The steps involved in using the relaxation technique for creating a more positive mood are:

- 1. Get in a comfortable position and close your eyes.
- 2. Clear your mind of stressful thoughts.
- 3. Relax all the muscles in your body.
- 4. Take a deep breath and hold it. Exhale slowly. Repeat.

(For more information on concentration management see Drobrovolny, McCombs, and Juda, 1980).

# Instance Specification

Techniques for Mood Creation	Example	Practice	Test
Self-talk	3	4	2
Relaxation	2	3	2

#### Testing

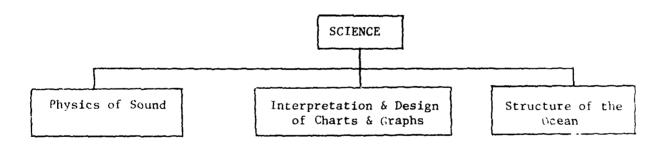

The objective will be tested by demonstrating the use of either the self-talk or relaxation techniques for creating a more positive mood when presented with a scenario of a stressful situation.

#### SCIENCE

# Introduction

Surveys and interviews with subject matter experts from OT, AW, STS, and STG "A" school and common core revealed a science prerequisite for the Acoustic Sensor Operations ratings. The science requirement consists of three main areas: physics of sound, charts and graphs, and structure of the ocean. The physics of sound is the most important of the three areas and covers the production, transmission and propagation of sound, frequency and sound wavelengths, and sound mediums. The second area involves both the interpretation and design of charts and/or graphs. The ocean structure area includes general ocean knowledge and geography of the ocean basin.

# Major Topic Areas

# Production of Sound

#### Objective

1.0 Given a short answer test, be able to list and define the three basic elements that are necessary before sound can be produced. The criterion is 100%.

# Objective Type

Remember category.

#### Instructional Media/Method

Lecture and Print.

# Strategy Specifications

The three elements should be illustrated with diagrams to present a clear picture of sound mediums. Students should also be presented with an example in which one of the three elements is missing resulting in no sound production (e.g. a bell ringing in a vacuum).

# Instance Specifications

Types of Elements	Example	Practice*	Test
1. Source of Sound	2	1	2
2. Sound Medium	2	1	2
3. Detector	2	1	2

<sup>\*</sup>Students should make up an example of each of the elements.

#### Testing

The objective will be tested by having the students list the three basic elements with a brief definition.

#### Sound Generation

# Objective

2.0 Using the tuning fork as an example, the student will write a short answer explanation of sound generation. The answer must contain motion/vibration, sound waves and medium.

# Objective Type

Remember principle.

#### Instructional Media/Method

Lecture, demonstration and print.

# Strategy Specifications

The element to emphasize in this instruction is the motion/vibration action necessary to generate sound. This concept should be illustrated with examples of motion, such as: levers moving up and down, the firing of a gas combustion engine, or turning propeller blades.

# Instance Specifications

Types of Sound Generation	Example	Practice*	Test
1. Machinery	2	2	0
2. Tuning Fork	1	1	1

<sup>\*</sup>Students should make up examples of motion/vibration sound generation

# Testing

The objective will be tested by describing how a tuning fork generates sound.

# Sound Wavelengths

# Objective

3.0 Given a diagram of a wave pattern, be able to label parts of the diagram to illustrate cycle, wavelength, amplitude, and frequency. The criterion is 90% of the items labeled correctly.

# Objective Type

Category use unaided.

# Instructional Media/Method

Lecture, print and diagram.

# Strategy Specifications

The purpose of this objective is to expand the student's general knowledge of sound wavelengths. The concept and calculation of frequency is the most important element in this segment.

# Instance Specifications

Types of Wave Patterns	Example	Practice	Test
1. High frequency wavelength	1	1	2
2. Low frequency wavelength	1	1	2

# Testing

The objective will be tested by labeling the cycle, wavelength amplitude and frequency of a sound wavelength.

# Sound Propagation & Media

# Objective

4.0 Given a short answer test, be able to answer questions on the relationship between sound mediums and sound propagation. The standard is 90%.

# Objective Type

Principle use unaided.

# Instructional Media/Method

Lecture and Print.

# Strategy Specifications

The instruction must communicate the effect that sound mediums have on sound propagation. Emphasis should be placed on sound transmission in sea water and especially the effects of temperature, pressure and salinity on sea water as a medium.

#### Instance Specifications

Тур	es of Sound Medium	Example	Practice	Test
1.	Fresh water	1	1	1
2.	Sea water			
	a. temperature	1	2	2
	b. pressure	1	2	2
	c. salinity	1	2	2
3.	Air	1	1	1
4.	Solid medium	1	1	1

# Testing

The objective will be tested by correctly answering test questions on the relationship between sound mediums and sound propagation.

# Sound Propagation Terms

# Objective

5.0 Given a list of sound propagation terms and definitions, leading to match the term with the correct definition. The criterion is 90%.

# Objective Type

Remember fact.

# Instructional Media/Method

Lecture and Print.

# Strategy Specifications

N/A

instance Specifications

Type of Terms	Example = Definition	Practice

# Testing

The objective will be tested by matching the definitions to the war and

# Charts and Graphs

# Objective

6.0 Given a graph or chart, be able to interpret the data displayed. The standard is 90%.

# Objective Type

Rule use unaided.

# Instructional Media/Method

Lecture and print, (including charts and/or graphs).

# Strategy Specifications

The examples, practice and test items should be Navy related.

# Instance Specifications

Types of Data	Examples	Practice	Test
Graph	3	4	2
Chart	3	4	2

# Testing

The objective will be tested by correctly interpreting data displayed on a graph or chart.

# Graph Design

# Objective

7.0 Given a blank graph showing an X and Y axis and a set of data, be able to label each axis and plot the data on the graph. The standard is 100% of the data plotted correctly.

# Objective Type

Rule use unaided.

# Instructional Media/Method

Print and Lecture.

# Strategy Specifications

N/A

# Instance Specifications

Types of data	Example	Practice	Test
Label axis			
Х	1	1	2
Y	1	1	2
Plot data			
X	3	4	2
Y	3	4	2

# Testing

The objective will be tested by both correctly labeling the axis, and plotting data on a blank graph.

# Structure of the Ocean

# Objective

8.0 Given a short answer and multiple choice test, be able to demonstrate knowledge of the structure of the ocean. The criterion is 90%.

# Objective Type

Remember category.

# Instructional Media/Method

Print/lecture and relief map demonstration.

# Strategy Specifications

This section should emphasize the structure of the ocean in a general way. The intent here is not to teach specific names and locations, but rather to provide an overall awareness of the physical, and especially the geological aspects of the ocean. To ensure the students understanding of the geological structures of the ocean, a relief map should be used to demonstrate them.

# Instance Specifications

Types of Ocean Structures	<b>Examples</b>	Practice	Test
Geological Oceanography			
1. continental shelf	2	3	1
2. ocean trenches	2	3	1
3. sea mounts	2	3	1
4. submarine canyons	2	3	1
5. ocean ridges	2	3	1
6. ocean basins	2	3	1
7. ocean fractures	2	3	1
Physical Oceanography			
l. currents	1	2	]
2. temperature	1	2	1
3. salinity	1	2	1
4. pressure	1	2	1

# Testing

The objective will be tested by the use of a short answer and multiple choice test concerning geological and physical aspects of the ocean.

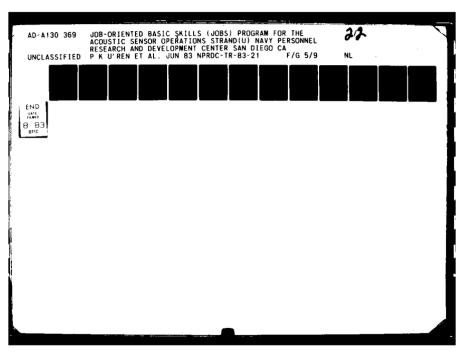

# MECHANICAL OF TRATIONS AND BELANTONES OF

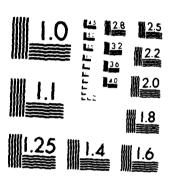

# antroduction

The the A' schools, statements are tangent in artasi new years in high a mechanisms work. The details of a ship's engine functions, such as a four stroke cycle, would be easier to learn if the students had more of what an engine, in general, looks like and how the parts of the interact. Unfortunately, this radimentary knowledge cannot be proby the "A" school. Three areas of concern include engine shapes an mechanical relationships among engine parts, and turbice the order titst two areas use the automobile engine as a model.

MICROCOPY RESOLUTION TEST CHART NATIONAL BUREAU OF STANDARDS 1963 A

# Engines - Diesel/Gas

# Objective

1.0 Given a series of true/false statements concerning gas and diesel engines, the learner will determine whether each statement is true or false. The criterion is 90%.

# Objective Type

Remember category.

# Instructional Media/Method

Print and Lecture.

# Strategy Specifications

The emphasis here should be on the differences between the gas engine and the diesel engine. It is not important for the student to memorize the names of specific parts. The engine stroke cycle should also be briefly introduced (e.g. the major difference between a 2 stroke and 4 stroke cycle.)

And the second s

# Instance Specifications

Types of Engines	Example	Practice Remembering	Test
Gas	3	1	2
Turbine	3	1	2

# Testing

This objective will be tested by correctly answering a series of true/false statements concerning gas and diesel engines.

# Identifying Mechanical Parts

# Objective

2.0 Given a diagram of a car's engine, drive shaft, and electrical auxiliaries, the learner will label the following parts: piston, alternator, cylinder, crankshaft, flywheel, transmission, fan belt, drive shaft, differential and battery. The standard is 90%.

# Objective Type

Remember fact.

# Instructional Media/Method

Lecture and Print.

# Strategy Specifications

Use diagrams to clearly illustrate the engine parts.

# Instance Specifications

Types of Engine Parts	Example of Engine Part	Practice Remembering	Test
Piston	1	1	1
Alternator	1	1	1
Cylinder	1	1	1
Crankshaft	1	1	1
Flywheel	1	1	1
Transmission	1	1	1
Fanbelt	1	1	1
Drive shaft	1	1	1
Differential	1	1	1
Battery	1	1	1

# Testing

This objective will be tested by correctly identifying the following parts on a diagram: piston, alternator, cylinder, crankshaft, flywheel, transmission, fan belt, drive shaft, differential and battery.

# Functions of Mechanical Parts

# Objective

3.0 Given a list of mechanical parts and a list of functions, the learner will match the part with its function. The standard is 90%.

# Objective Type

Remember category.

# Instructional Media/Method

Print and Lecture.

# Strategy Specifications

Emphasis is on the general overall function of each part, and how the parts interact to make the car function properly.

# Instance Specifications

Engine Parts	Example of Function	Practice <u>Remembering</u>	Test
Piston Alternator Cylinder Crankshaft Flywheel Transmission Fanbelt Drive shaft Differential Battery	1	1	1
	1	1	1
	1	1	1
	1	1	1
	1	1	1
	1	1	1
	1	1	1
	1	1	1

# Testing

This objective will be tested by matching specific parts of an engine with their function.

#### Gearing Mechanisms

#### Objective

4.0 Given a short answer test, be able to answer questions on the function of gearing mechanisms and gear reduction. The standard is 90%.

# Objective Type

Remember principle.

# Instructional Media/Method

Print and Lecture.

# Strategy Specifications

The main goal of this section is to communicate a general understanding of how the power from an engine is translated into propulsion. For example: how does a car engine turn the car wheels to move it down the street; or how does a boat engine spin the propeller blades to move it through the water? This section should also emphasize that the gearing mechanisms (in a car or boat) involves gear reduction translating energy from large to small gears and the calculation of gear reduction ratios (discussed in the math section). A detailed presentation of the drive shaft, differential, transmission, etc. is not necessary. The purpose of gearing systems and the ratio of small to large gears is sufficient.

#### Instance Specifications

Type of Gearing Questions	Example	Practice	<u>lest</u>
1. General	1	2	3
2. Specific with diagrams	1	2	ز .

#### Testing

This objective will be tested by short answers to questions concerning gearing mechanisms and gear reduction.

#### Turbines

#### Objective

- 5.0 The learner will briefly describe the operation of a turbine. Attributes required for full credit include:
  - a. a force coming in contact with blades
  - b. spinning action of blades
  - c. torque energy carried by turbine shaft

# Objective Type

Remember principle.

# Instructional Media/Method

Print and Lecture.

# Strategy Specifications

The general concept of turbine operation should be emphasized. Concentrate on the three attributes specified in the objective. There should be at least two examples of the types of "force" coming in contact with the blades. In particular, steam (produced by nuclear power) should be used as an example of a force that spins the turbine blades.

#### Instance Specifications

Turbine Operation	Example of Operation	Practice Remembering	Test
Force	2	1	2
Spinning blades	2	1	2
Torque energy from turbine shaft	2	1	2

#### Testing

This objective will be tested by briefly describing the operation of a turbine. The description should include information on a) the force coming in contact with blades, b) spinning action of blades and c) the torque energy carried by the turbine shaft.

#### Mechanical Relationships

#### Objective

6.0 Given a list of mechanical parts, be able to identify which of the following categories they belong to: prime mover, drive or gearing system, propulsion system, or auxiliary.

#### Objective Type

Category use unaided.

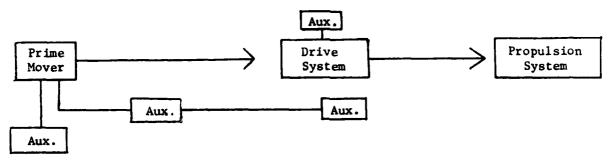

#### Instructional Media/Method

Print and Lecture.

# Strategy Specifications

The mechanical relationship among the various mechanical parts is the most important concept in the mechanical operations area. Mechanical parts and functions can be separated into four major categories: prime mover (e.g. gas, diesel, or turbine engines); drive or gearing system (e.g. drive shaft, gearing mechanisms, transmission); propulsion system (e.g. propeller blades, car wheels); and auxiliaries (e.g. generator, alternator, compressor) (see figure below). Detailed information about these areas is taught in the OT, STS, STG, and AW "A" schools. However, the way these areas are interrelated and function as a whole is not emphasized.

This segment should define the four categories and show how these broad areas organize the separate mechanical functions taught in objectives 2.0 and 3.0. Continue to use car (and boat) examples to illustrate the concept.

#### Instance Specifications

Categories	<u>Example</u>	Practice*	Test
1. Prime Mover	2	4	2
2. Drive System	2	2	1
3. Propulsion System	2	1	1
4. Auxiliaries	2	4	2

<sup>\*</sup>Students should generate items that would fall into each category.

# Testing

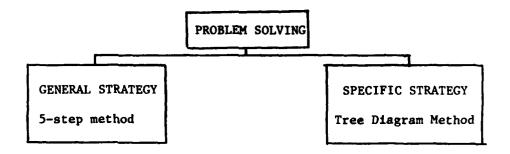

The objective will be tested by categorizing a list of mechanical parts into four categories: prime mover, drive or gearing system, propulsion system or auxiliaries.

# PROBLEM SOLVING

# Introduction

Problem solving is an area with which many people experience difficulty. The acoustic sensor operations communities indicated that problem solving was a necessary skill in the performance of acoustic analysis, and that it is not directly addressed in their respective "A" schools. The 5-step and tree diagram methods will give the students problem solving strategies to use in "A" school and on the job.

# Major Topic Areas

# Five-Step Method

#### Objective

1.0 Given a set of verbal reasoning problems to solve, the learner will apply the five-step problem solving method (see Whimbey & Lockhead, 1980). This objective will be achieved when the learner solves 90 percent of the problems, and illustrates how he/she applied the five-step problem solving method.

#### Objective Type

Rule use unaided.

# Instructional Media/Method

Print and Lecture.

#### Strategy Specifications

The steps involved in using the five-step problem solving method are:

- 1. Have a positive attitude.
- 2. Clearly understand the facts and relationships.
- 3. Work from beginning to end. Do not guess.
- 4. Break the problem into smaller manageable parts.
- 5. Active problem solving. For example you may decide to use mental pictures, self-talk, and/or diagrams to clarify the material.

Use military related examples and practice whenever possible.

# Instant Specifications

Types of data	Example	Practice	Test
Five-step method	3	4	3

#### Testing

The objective will be tested by applying and illustrating the five-step problem solving method to a set of verbal reasoning problems and successfully solving 90 percent of them.

	Problem-Solving Method		
Types of Data	Examples 1 2 3 4	Practice	<u>Test</u> 1 2 3

<ol> <li>word</li> <li>sentence</li> <li>paragraph</li> <li>passage</li> </ol>	x x x x	x x x	x x x
Additional information			
<ol> <li>break down</li> <li>surround</li> <li>other source         <ul> <li>i.e. instructors</li> </ul> </li> </ol>	x x x	x x	x x
library)	Х	Х	х
Check and correct  1. does conclusion fit 2. if not repeat steps 1-3	x x x x	x x x x	x x x

A reading pre and posttest consisting of job related passages should be developed. Students will receive the pretest before reading comprehension instruction and the posttest after completing the instruction. (For more information on reading comprehension strategies see Drobrovolny, McCombs, and Judd, 1980.)

# Testing

The objective will be tested by listing the rules associated with the questioning and the problem solving methods.

# Tree Diagram Method

#### Objective

2.0 Given problems requiring progressive analysis, the learner will apply the decision tree problem solving strategy. The objective will be achieved when the learner illustrates how he/she applied the decision tree strategy for a minimum of three levels.

# Objective Type

Rule use unaided.

# Instructional Media/Method

Print and Lecture.

# Strategy Specifications

The tree diagram method is a progressive deepening problem solving strategy. Binary decisions, such as yes-no or on-off, are made in a stick figure tree diagram. Branches of the tree are pursued until the problem is solved (Davis, 1974).

#### Instance Specifications

Types of Tree Diagram	Examples	Practice	Test
1. Two branches (minimum 3 levels)	1	2	2
2. Three branches (minimum 3 levels)	1	2	2

# Testing

The objective will be tested by tree diagramming a problem to solution.

# Vigilance

#### Objective

3.0 Given a forty minute vigilance task, the learner will participate in the task and then graph his/her vigilance performance.

#### Objective Type

Rule use unaided.

#### Instructional Media/Method

Lecture and Print.

#### Strategy Specifications

Maintaining viligance during watch is an important job requirement for Acoustic Sensor Operators. Students should be informed about vigilance performance in general. For example, the rate of detection decreases substantially in the first 30 minutes of any vigilance task and then levels off. Students should also be provided with suggestions for maintaining alertness that they could implement on-the-job, such as, getting plenty of sleep the night before a watch period, taking advantage of all breaks, requesting the use of radio, or shifting their body position frequently. (For more information about vigilance see McGrath, Harabedian, and Buckner, 1959; Mayo 1979; and Bergum and Lehr, 1962a).

A forty minute vigilance task should be developed to expose the students to a vigilance experience. The vigilance task will also involve the students graphing their own performance to observe the decrement curve. The graph should be shared with the class to show the generality of vigilance performance decrement and individual differences.

# Instance Specifications

Type of Vigilance Task	Example	Practice	Test
Visual Task	1	0	1

#### Testing

The objective will be tested by presenting the students with a forty minute vigilance task and having the students graph their performance.
